GO GREEN - SAVE GREEN

The Solar Advantage.

Enlightened people are making smart decisions contributing to the health of our planet. Owning your own solar energy generation system helps the earth in more ways than just reducing your electric power bill. Using solar energy can help maintain present ocean temperatures and reduce the United States dependency on foreign oil. Now is the time for solar! By using electricity that you generated, locally (on your roof) you are not using fossil or nuclear fuels and are part of the growing green solution team. A typical residential photovoltaic system can save the emissions of approximately 3500 pounds of carbon dioxide, 4 pounds of nitrogen oxides and 2 to 3 pounds of sulfur dioxide greenhouse gases annually.

How Solar Works.

Your new solar system will power your home year round but also during peak demand periods in the summer when many Californians need A/C. Electricity generated by your system will be used first by your home and any excess will go back on to the utility electric grid, spinning your meter backwards in the process. When you need more power than your solar system supplies, at night for example, then your electricity will come directly from the utility grid and your meter will move forward. You can use the power grid like a power bank for your electricity storage. You are billed for your net electricity consumption via a “net-metering and grid-tied” agreement with PG&E or your local utility company.

Why Automation Solar?

At Automation Solar we pride ourselves on providing first-class service and complete project management. We perform energy audits, reserve rebate funds, secure the permits, provide the materials, complete the installation, and monitor your long-term electricity production. Our experienced team will get the job done on-time and on-budget. We simplify solar.

Financing: We work with your lender to secure financing, and provide information to take full advantage of all rebates and tax incentives. A system can be purchased with \$1000 down, and a loan agreement we help you get. RESIDENTIAL systems offer a 5 year return on investment, depending upon the KW size and generation capability installed. COMMERCIAL is even less.

100% Satisfaction: We use a proven design approach and clear communication for automating and optimizing your solar technical solution. We are problem solvers with PV sizing and panel location experience to generate the right amount of electricity - not too much -and a system that will be aesthetically pleasing.

Quality Construction: We will architect a solar electric system tailored specifically to your home. Our crew is licensed and bonded and knows exactly what to do. We use only the best components produced by solar industry leaders with expert testing procedures, strong product support and long-term warranties.

Warranty: Once your system is installed, Automation Solar will perform all maintenance and manufacturers warranty work for a period of 10 to 25 years. We will provide support documents and training for you. We stand with confidence behind our systems and service. Let us be your clean and green energy supplier.

- ◆ Aesthetically pleasing for any style roof or property
- ◆ Energy independence through energy generation
- ◆ Electric bills reduced or eliminated
- ◆ Protection against electrical energy price volatility
- ◆ Differentiation is proper sizing, experience, reputation
- ◆ High tech built –in as part of your home investment.
- ◆ Member of Northern California Solar Energy Association
